

WISE Educator Guide

The screenshot displays the WISE Educator Guide interface. On the left is a dark sidebar with a 'MODULES' section containing 'Surgery', 'Skills', 'OnCall', and 'CARE'. Below this is a 'REPORTS' section with 'Module Progress', 'Question Progress', and 'Quiz Activity'. At the bottom of the sidebar is a red 'Logout' button. The main content area is titled 'Surgery' and shows '22 Module(s)' with an 'All' filter and a search bar. It features a grid of 12 module cards, each with an anatomical image, title, progress bar, and 'Launch'/'Details' buttons. The modules shown are: Abdominal Aortic Aneurysms (7 of 7 Done), Adrenal Adenoma (2 of 8 Done), Anorectal Disease (0 of 8 Done), Appendicitis (8 of 8 Done), Bariatric (8 of 8 Done), Bowel Obstruction (8 of 8 Done), Breast Cancer (9 of 9 Done), and Burn Management (0 of 8 Done). The bottom row contains four more cards that are partially visible.

How to Use WISE-MD
During Your Clerkship

Overall Structure	1
WISE Reporting	2
WISE-MD	
Module Overview	5
Incorporating into your course	12

WISE-MD is an online program designed to serve the educational needs of allopathic and osteopathic medical students, as well as other advanced practice providers, during their surgical clerkship. WISE-MD consists of thirty-eight modules, edited by members of the Association for Surgical Education for content and accuracy, that address all the major topics typically taught during a surgical clerkship.

Overall Structure

Depending on your institution's subscription you may have access to any combination of the following courses:

WISE-MD

WISE-OnCall

CARE

Disease-based modules

Symptom-based modules

Addiction modules

The screenshot displays the WISE Online Medical Learning interface. On the left is a dark sidebar with a 'MODULES' section containing 'Surgery', 'Skills', 'OnCall', and 'CARE'. Below this is a 'REPORTS' section with 'Module Progress', 'Question Progress', and 'Quiz Activity'. A red 'Logout' button is at the bottom of the sidebar. The main content area is titled 'Surgery' and shows a grid of 12 modules. Each module card includes an anatomical image, the module name, a progress bar, completion status (e.g., '7 of 7 Done'), and 'Launch' and 'Details' buttons. The modules shown are: Abdominal Aortic Aneurysms, Adrenal Adenoma, Anorectal Disease, Appendicitis, Bariatric, Bowel Obstruction, Breast Cancer, and Burn Management. A search bar at the top right of the grid contains the text 'Search...'. A purple arrow points from the 'Quiz Activity' link in the sidebar to a purple box at the bottom left. Another purple arrow points from the search bar to a purple box at the bottom right.

User Activity

This report will give you group activity reporting based on 2 date parameters: date the account was added and date of activity. This will show give you a report of multiple learners at once. If you use more than one product (Surgery, OnCall, or CARE) then you are able to filter by product.

The questions and practice cases in WISE are for learner self-assessment only and are not designed to be used for grading purposes other than completion

There are no reports about the questions available to faculty/ administrative staff and learners are able to attempt the questions and practice cases infinite times.

Faculty interested in noting completion of these questions can ask the learners to screenshot the learner facing reports and that image/file can be uploaded

Surgery modules are disease-based case modules

Abdominal Aortic Aneurysms
Adrenal Adenoma
Anorectal Disease
Appendicitis
Bariatric

Module Content - Skills Modules

Skills modules focus on the specific surgical skills that are integral to the education of students during their surgical clerkship. Learning about suturing, knot tying, surgical instruments, and ultrasound skills (to name a few) will enhance each student's understanding, experience, and appreciation of their surgical rotation.

Surgical Instruments

Overview

Cholecystitis

Overview

9 Topics

Questions

Summary

★ Goals

Upon completion of this module, the student should be able to recognize and evaluate the key considerations in the diagnosis and surgical management of a patient with acute cholecystitis including:

1. the key findings underlying the diagnosis of acute cholecystitis
2. the principal considerations surrounding the decision to treat it surgically
3. the anatomy and surgical steps associated with a laparoscopic cholecystectomy
4. the post-operative considerations and complications that may be encountered during a patient's recovery.

🎓 Objectives

1 Fundamentals

- Describe the relevant anatomy of the gall bladder and how the location of the gall stone changes the symptoms and disease process.

Questions

Self-assessment questions to complete after viewing module

[Overview](#)[9 Topics](#)[Questions](#)[Summary](#)

Topics

- ☒ Fundamentals
- ☐ History
- ☐ Physical Exam
- ☐ Laboratory Studies
- ☐ Imaging Studies
- ☐ Decision Making
- ☐ Surgery
- ☐ Pathology
- ☐ Post-operative Care

Question 1 / 4

A stone in the cystic duct will cause(choose all that apply):

Answer

- ☒ Biliary colic
- ☐ Acute cholecystitis
- ☒ Gall stone pancreatitis
- ☒ Chronic cholecystitis

Feedback

A stone in the cystic duct will cause issues only with the gallbladder itself. Examples would include biliary colic, acute cholecystitis, and chronic cholecystitis. If a gallstone leaves the cystic duct and travels into the common bile duct it will cause entities such as gallstone pancreatitis, choledocholithiasis, and cholangitis.

Continue

★ Objectives for Laboratory Studies

- Discuss the relevant lab test to obtain in patients with RUQ pain including CBC, LFTs, bilirubin fractionation, lipase and pregnancy test and what impact they have on refining the differential diagnosis.

Findings

History

CHIEF COMPLAINT

- Abdominal pain for the past 3 days

HISTORY OF PRESENT ILLNESS

- 45-year-old female
- Several weeks of intermittent abdominal pain after meals
- Fatty diet
- Became markedly worse and constant
- Localizes the pain to RUQ
- Radiates to back
- Loss of appetite after eating dinner last night
- Nausea
- Vomiting
- Fever

PAST MEDICAL HISTORY

- Hypertension
- Hypercholesterolemia

SOCIAL HISTORY

- She does not smoke, drink alcohol, or use drugs.

REVIEW OF SYSTEMS

- Is positive for abdominal pain
- Nausea
- One episode of vomiting
- Subjective fever.

Details

- WBC count in Biliary Tract Pathology
- Alkaline Phosphatase in Biliary Tract Pathology
- Amylase/Lipase in Biliary Tract Pathology
- Bilirubin in Biliary Tract Pathology
- AST/ALT in Biliary Tract Pathology
- Charcot's Triad and Reynold's Pentad
- Laboratory Studies Transcript

The videos within each module will walk you through the continuum of care for a patient seeking intervention for a health issue which often leads to surgical intervention.

Objectives for the topic

Findings

Data that supports the physician's clinical reasoning and differential diagnosis for the example patient case. You can refer to this section to help keep track of the patient as you progress through the module

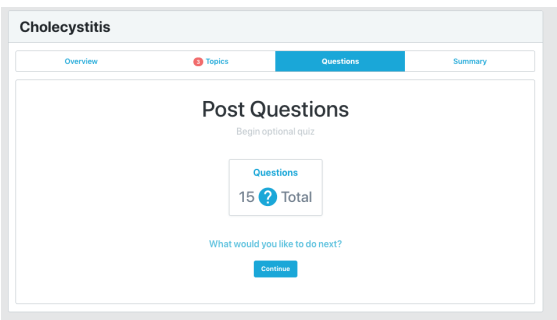

Details

Links to additional information pertaining to the topic

Questions

Vignette-based questions meant to serve as a self-assessment after you have completed viewing all of the module content

Multiple attempts are allowed and scores are not reported to faculty

Cholecystitis

Overview Topics Questions Summary

Question 1 / 15

A 23 year old, overweight, black woman with a history of hemolytic anemia presents to the emergency department with fever and right upper quadrant pain. A right upper quadrant ultrasound is performed which demonstrates gallstones, a thickened gallbladder wall, and pericholecystic fluid.

Which patient characteristic puts her at highest risk of developing acute cholecystitis?

Answer

- ☐ Patients with hemolytic anemia
- ☐ Obesity
- ☐ Young age
- ☐ Ethnicity
- ☒ Female sex

Feedback

Compared to males, females have a 3:1 risk ratio. Having a first degree relative with a history of acute cholecystitis increases risk by a 2:1 ratio. Other factors that increase patient's risk are a history of hemolytic anemia, terminal ileal disease, type IV hypercholesterolemia, native American ethnicity, and diabetes mellitus.

How to Use WISE-MD For Your Clerkship

Schools have found a variety of ways to incorporate WISE-MD into their curriculum. Let us share some of the models so that you can find the best use for your program:

Use WISE-MD to replace lectures in a variety of settings:

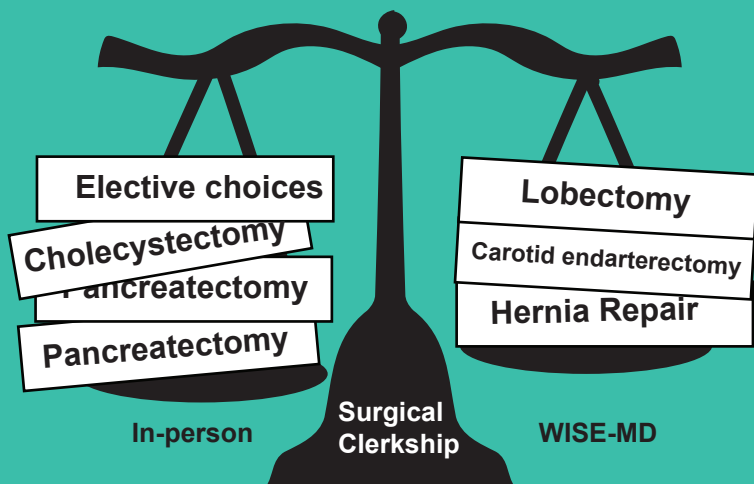

Replace lectures entirely:

Free up time for students to view more surgical procedures, participate in clinics, and spend time at the bedside in the evaluation, treatment, and care of patients

Flipped classroom settings:

If students view the modules before class, then classroom time can then be devoted to discussing and expanding on the principles learned in the modules.

Clerkships using this approach have found increased student satisfaction in their didactic curriculum.

Use WISE-MD for a standardized clerkship experience:

Schools that have multiple clinical venues for students find it difficult to provide quality and consistent content at all hospital sites used for the clinical rotations.

WISE-MD enables all students to be exposed to similar core surgical content and basic skills of all surgical topics, regardless of clerkship location and elective choices.

WISE-MD modules address the requirements of the LCMEs.

Encourage students to use WISE-MD as a clinical study aid

Just-in-time teaching tool:

WISE-MD can help orient students to surgical procedures prior to their operating room experience.

Remediation:

Students that appear to be underperforming in certain areas can be assigned WISE-MD modules as part of a remediation program.

OSCEs:

WISE-MD modules can serve as preparatory material for students taking OSCEs

Shelf Exam:

Post test questions are written in the vignette style of shelf exam questions.

Use WISE-MD modules as a model for simulation

Many clerkship directors have created OSCEs that are based on specific modules as a way to assess whether students have truly grasped the relevant material.

The modules could be used to create other formative simulation experiences.
